**SYRINGE DISPOSAL BASICS**

If you find a needle, secure it using a sharps container or alternative. NEVER put loose sharps in the trash, recycling, or flush down the toilet!

**FDA RECOMMENDS ALWAYS USING FDA-CLEARED CONTAINERS**

If you do not have a sharps container, use an empty household container with these features:

- Stays upright
- Made of heavy-duty plastic
- Tight-fitting lid that cannot be punctured
- Does not leak

**SUPPLIES**

- Sharps Container
- Gloves
- Tongs
- Hand sanitizer or soap & water

**HOW TO HANDLE NEEDLES & avoid injury:**

**DO NOT**

- force needles or sharps into container
- put fingers inside the container
- bend, break, recap or remove the needle
- leave the needle unattended. If you must leave to get disposal supplies, ask another person to keep watch to avoid an accidental stick

**INSTEAD**

- make sure that you can clearly see and move around the needle
- ensure no children or others are nearby
- use gloves
- bring your sharps container or alternative to the needle, not the other way around

**TAKE ACTION**

1. Put on gloves
2. Place the container on the ground beside the syringe
3. Pick up the syringe by the middle of the barrel using tongs or gloved hands, whichever provides the most control
4. Place the syringe into the sharps container sharp end first
5. Secure the lid of the sharps container
6. Remove gloves and wash your hands

**WHERE TO DISPOSE OF NEEDLES safely & legally**

Indiana Recovery Alliance
118 S. Rogers St. Suite 2,
Bloomington, IN 47404
1-812-56-SAFER
indianarecoveryalliance.org

Monroe County Solid Waste Management District
3400 S. Walnut St.
Bloomington, IN 47401
1-812-349-2020
http://www.gogreendistrict.com/

Indiana Recovery Alliance will accept both FDA approved containers as well as non-FDA approved puncture resistant containers.

Monroe County Solid Waste will ONLY take FDA-approved sharps containers.

**WHERE TO OBTAIN AN FDA-APPROVED SHARPS CONTAINER**

If you need a sharps container: ask at a pharmacy, medical supply company, healthcare provider, household hazardous waste department or online at:

WHAT ARE THE RISKS?

- There has never been a reported case of transmission of HIV via a community found syringe accidental needle stick (CFSASN). Journal of Public Health 2013
- The risk of Hepatitis B and C transmission from a CFSANS is "practically negligible." British Medical Journal
- No HIV cases ever from a CFSANS. Practically negligible for other blood borne virus from a CFSANS.
- The REAL danger comes when people who use drugs don’t have access to sterile syringes. To take one example, the Hepatitis C and HIV outbreak in Scott County, which will affect over 230 people and will cost nearly $100,000 just for HIV treatment. Syringe service programs like ours decrease transmission by over 70%.

WHAT TO DO IN CASE OF A NEEDLESTICK

1) STAY EDUCATED.
2) AVOID HYSTERIA.

- Remain calm
- Wash the needlestick wound with soap and water
- Do not squeeze the wound
- Apply antiseptic and cover with a band-aid
- Seek post-exposure evaluation at a health clinic

CD, 2003

"A last resort is to dispose of the used syringes/sharps in a heavy duty plastic bottle such as a laundry detergent bottle and tape the lid shut. (Do not use coffee cans – they are not puncture resistant) On the outside of the bottle, where it can be easily seen, write “WARNING: SYRINGES - DO NOT RECYCLE” on the outside and then place in the household trash.
